

Pace of Ecology

Pursuit - High CFF_{max}

High relative motion between predator

Ballistic - Intermediate CFF_{max}

Motion mainly from tracking prey

Foraging - Low CFF_{max}

Feeding mainly on sessile sources,

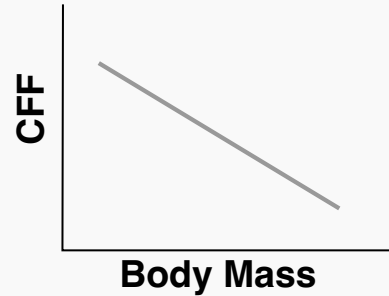

Volant - High CFF_{max}

High relative motion compared to environment

Body size

Smaller animals are predicted to have higher CFF values due to higher maneuverability

Light levels

Animals in high light environments are predicted to have higher CFF than those in low light environments
